Last Updated: 21/02/2020 But the free apps have some limitations. Photoshop is designed as a full-featured image editor and the apps usually have a more limited range of features. Also, they tend to be limited in their file support, such as not having the latest versions of layers, so you might want to buy the full-featured PS version. So which is the best Free version of Photoshop? This article compares the three most popular Free apps and how they compare to each other. Which is the Best Free Photoshop App? Adobe Photoshop Elements (Windows/Mac) Every professional photographer should be using Elements, and it is the lightest in features but is the best, most powerful app of the bunch. Unfortunately Adobe were not quite as farsighted back when they first released Elements, so it is not a very modern app when compared to what is available today. However, this brings to life the argument that most manufacturers want all of us to use their proprietary software on their products, not the software we can buy as individual products. The developers have since attempted to update it to better suite the needs of modern users. It has many of the basic functions, such as the ability to make selections and applying filters. It has a basic version of layers, although they only have the ability to add new layers to an existing file rather than move layers around. It also has some additional features, such as the ability to correct lens distortions on images. It is easy to use with a simple and easy to understand interface. Photoshop elements hasn't been updated for a couple of years, but the official support is still good. Today on most operating systems it is as good as you will get, but there are a few issues with Photoshop elements that can be annoying for non-expert users. These issues have been exacerbated by recent MacOS issues with Mac's not updating their software. Adobe released a new version of Photoshop Elements two days ago. It can be downloaded here Adobe Photoshop Express (Windows/Mac) The idea of a Photoshop Express is quite simple. It is a "however small a photo, however small a file" version of Photoshop. It takes a copy of your documents on your desktop and any images that you select to be saved to their server.
